Several of the following problems may also be solved by using only one unknown quantity. 3. There is a certain number consisting of two places of figures; the sum of the figures equals 6; if from the double of the number, 6 be subtracted, the remainder is a number whose digits are those of the former in an inverted order; required the number. In solving problems, of this kind, observe that any number consisting of two places of figures is equal to 10 times the figure in the ten s place, plus the figure in the unit s place. Thus, 23 is equal to 10x2+3. In a similar manner, 325 is equal to 100X3+10X2+5. Let x= the digit in the place of tens, and y= that in the place of units. Then, 10x--y= the number. And 0y--x= the number, with the digits inverted. Then, x+y=G (1.) And 2(10x+y)--6=l0y+x (2.) Or, 20a;+22/--6=10y+x. lQx=8y+6 =--8y+48, multiplying (1) by 8, and transposing. 27x=54, by adding. x=2, and y=6--2=4. Ana. 24. 4. What two numbers are those to which if 5 be added, the sums will be to each other as 5 to 6; but, if 5 be subtracted from each, the remainders will be to each other as 3 to 4? By the conditions of the question, we have the following proportions: a;+5: y+5:: 5: 6--5: y-- 3: 4 Since, in every proportion, the product...
